Experience Clinical Optimization with Vitera Intergy EHR

The guiding principle in selecting the right Electronic Health Record (EHR) for your practice is simple. In order for an EHR to work, your physicians and clinicians should be able to easily learn and use the technology in a way that enhances their clinical workflow rather than impedes it and it should work for your specialty.

Vitera Intergy EHR empowers you to easily access clinical information and provides you with a customizable system that adapts to existing workflows rather than forcing you to change how you work. With specialized templates for primary care, OB/gynecology, cardiology, orthopedics, pediatrics and many more surgical and non-surgical specialties, Intergy EHR easily adapts to the needs of virtually any size or type of practice.

Easily Transition from Paper Charts to Electronic Documentation

Move from paper patient charts to a user-friendly electronic format. Scan hard-copy documentation into the system and you get instant access to accurate information, simultaneously from multiple locations. Learn to document visits at your own pace.

- Eliminate misplaced / lost paper charts

- Customize the system to meet your workflow by using modifiable flowsheets and "wizards" for creating common reports and documentation formats.

- Add new data directly into the patient record through a variety of methods including laboratory interfaces, HL7 and manual entry as well as device interfaces.

Improve Coding with Structured Encounter Documentation

Capture the data required for meaningful use reporting directly within encounter documentation. With structured clinical documentation, you can comprehensively document the entire patient encounter using codified data that is both reportable and provides accurate E&M coding support. Complete the visit by electronically ordering lab tests, submitting prescriptions, and documenting required follow up and plan of care. For ongoing care of chronic conditions, customizable disease management and preventative care health maintenance tools ensure accurate documention so that you know you're delivering the best care possible.

BENEFITS

- Confidence using a Certified EHR
- Eliminate misplaced / lost paper charts with electronic storage and retrieval of documents and images
- Reduce overall transcription costs with Encounter Note
- Improve the speed and accuracy of prescriptions with integrated e-prescribing
- Enhance quality of care using Health Management reminders
- Improve security of patient data with enhanced patient privacy options
- Participate in meaningful use, P4P, CMS and other incentive programs

▲ Intergy EHR Encounter Note uses structured clinical data from Medcin® to provide comprehensive encounter documentation, while suggesting correct coding level for each visit.

COMPLETE EHR AMBULATORY
2011–2012

CCHIT CERTIFIED 2011
Ambulatory EHR
+Cardiovascular Medicine

This Complete EHR is 2011/2012 compliant and has been certified by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.

Vitera Intergy Version 7.0, is a CCHIT Certified® 2011 Ambulatory EHR, additionally certified for Cardiovascular Medicine.

- Improve coding accuracy and reportability by using the Medcin® nomenclature in Encounter Note.

- Health Management provides clinical guidelines for meaningful use for enhanced clinical decision support.

- Create and track orders for follow-up (mammograms, blood tests, etc.) with Orders & Tasks functionality.

- Use Predictive Order Management (POM) to learn from practice patterns to create standard condition-specific treatments.

- Obtain instant access to drug interaction information with integrated e-prescribing and Drug Utilization Review (DUR) on demand.

- Qualify for CMS e-prescribing incentives thanks to RxHub integration with Pharmacy Benefit Managers (PBM's) which provides near-time payer-derived medication histories from multiple prescribers.

- Request and obtain lab tests and results electronically with integration directly into the patient record.

Evaluate and Report on Clinical Data

Automating the chart, the encounter note and order entry helps eliminate errors and provides you with documentation of patient interactions and events. Use this structured documentation, along with Vitera Practice Analytics business intelligence tool to report on meaningful use and P4P, participate in research studies, and analyze everything from outcomes to wait times.

Realize the Benefits of an Integrated EHR

Thanks to fully integrated connectivity to Vitera Intergy as well as to hundreds of labs, pharmacies, patient portals and more, Intergy EHR enables your practice to:

- Maximize billing efficiencies by integrating with the Intergy practice management system.

- Empower patients to take an active role in their healthcare via integration with the Vitera Intergy Practice Portal.

- Report on quality measures for meaningful use.

FEATURES

Online Access and Maintenance of Patient Charts	Manage patient charts electronically, virtually eliminating the problem of lost and misplaced charts. Enable authorized staff to access patient medical records online, in real time from multiple locations
Electronic Encounter Documentation	Reduce the need for costly, time-consuming dictation and transcription with Encounter Note electronic documentation. Using Medcin's comprehensive clinical vocabulary allows providers to document encounters using discrete clinical findings at the point of care to improve coding, help achieve meaningful use and participate in other incentive programs like P4P.
Integrated Order Management	Create and effectively track orders for follow-up via the Orders & Tasks function. Set staff and patient reminders that indicate an alert if an order has not been closed within a specified time period. Since Intergy EHR is fully integrated with the Intergy practice management system, you can also set follow-up Recall reminders and generate Recall Notices.
e-Prescription Generation and RXHub Integration with PBMs	Qualify for CMS e-prescribing incentives and provide near-time payer-derived medication histories from multiple prescribers.
Enhanced Patient Privacy	Control access by setting the Patient Privacy option. Any or all parts of the clinical record can be included/excluded from the patient information visible via the practice management system.
Drug Utilization Review (DUR) On Demand	Run and review a DUR report from either the Medications, Orders or Allergies tab – at any time, "On Demand". This function also allows you to flag suspect prescription requests, alerting you to potential drug interactions prior to submission.
Streamlined Lab Order Entry and Results Processing	Lab orders and results are saved directly into the patient record with automated lab solutions that connect you to most commercial labs along with in-office or hospital-based labs.
Standards-based Interoperability with Health Information Exchange	Supports HL7 standards for interoperability with third-party vendors.
Quality Care Reminders and Quality Measures Reporting	Robust Health Management tools provide reminders of upcoming or overdue care to help ensure that patients are receiving the care they require and that you're meeting the clinical guidelines for quality measures reporting.
Vitera Intergy Practice Portal Integration	Through a secure login, patients can go on-line and submit new patient registration forms, appointment requests and more through this portal. Information communicated through the portal can then be saved directly into the patient chart and accessed directly from within Intergy.
Clinical Performance and Outcome Evaluation	Integrate with Practice Analytics and use intuitive Dashboards, as you evaluate clinical and operational indicators to assess performance and outcomes.
